OUR FILE #

SUBJECT:

Engineering Services Proposals -Drainage and Road Works

YOUR FILE #

We require a substantial amount of outside consulting assistance in order to enable us to meet the very tight time limits and other requirements imposed under the Federal-Provincial Special Development Loan Program. One of the most stringent requirements is that relating to the required certification that "....plans and specifications are complete, or will be substantially complete by March 31, 1971,...".

Accordingly, proposals were invited from three Engineering Companies who are considered to be eminently suited to perform the type of work called for. A tabulation of the proposals and quotations is attached hereto.

More specifically, the particular engineering consulting services required in connection with the drainage portion of the program are, preliminary surveys, full design, and "as constructed" drawings, with the exclusion of construction layouts and inspection. For the road works portion of the consulting services required, we specifically request consulting services in the performance of preliminary surveys and draughting of street plans preparatory to design related to street construction; as for the drainage works, layout and inspection are not included, nor is design included for the road works portion.

It is recommended that authority be granted to enter into engineering consulting agreements as follows:

1.	With Vector Engineering:	Design #	700062 710001
		**	710001
		*1	710004
	•	* .	710 009
2.	With El-Sewaro Engineering:	Design #	700059
		11	700010
	•	11	700053
		¥F.	710002
		- 11	720005
		11	710006
		11	710007
		11	710003

In recommending entering into agreements with the two Engineering Companies mentioned, the basis of choice is for the lowest and most attractive proposal offered on each of the projects by each of the three Engineering Companies concerned.
