

ITEM 5  
MANAGER'S REPORT NO. 68  
COUNCIL MEETING Oct. 27/75

Re: TRAFFIC SIGNALS  
a. CAMERON STREET AND NORTH ROAD  
b. AUSTIN AVENUE AND NORTH ROAD  
c. AUSTIN AVENUE AND LOUGHEED HIGHWAY

On October 20, 1975, Council requested information on the proposed installation of a traffic signal at Cameron Street and North Road. Following is a report from the Municipal Engineer on this and two other signals in the same general area.

Our experience indicates that it normally takes about thirty days for signals to be installed from the time that tenders are awarded (we expect to be in a position to make an award in about three weeks). On this basis, we expect the signals in the area in question to become operational sometime after the middle of December.

This is for the information of Council.

TO: MUNICIPAL MANAGER 21 OCTOBER, 1975  
FROM: MUNICIPAL ENGINEER  
RE: CAMERON STREET AND NORTH ROAD

At the Council meeting of Monday, October 20, 1975 the question was raised as to the date of the proposed signal installation at the captioned intersection.

Tenders are now being called for signal revisions to the two signals at the intersections of Austin Avenue and North Road and Austin Avenue and the Lougheed Highway. These revisions will allow two lanes of eastbound traffic to turn left at the same time.

The present two phase controller now in use at Austin Avenue and North Road will be replaced and relocated to the intersection of Cameron Street and North Road.

In dealing with the priority of installation of the three signal works it was felt that the two Austin Avenue installations should be completed first to encourage commuter traffic to this arterial route. If we were to complete the Cameron Street installation first we could encourage and establish additional commuter traffic that would not otherwise use this routing.

The above is for the information of Council.
