ITEM Supplementary 16 MANAGER'S REPORT NO. 82 COUNCIL MEETING 1978 11 20

#### BURNABY PUBLIC LIBRARY AUTOMATION PROJECTS RE:

Following is a report from the Chief Librarian regarding the proposed automation of certain library services. Members of the Library Board and the Chief Librarian will be in attendance at the budget meeting on November 22 at which

time Council may want to inquire on any aspect of the automation projects that are being proposed.

#### **RECOMMENDATION:**

1. THAT the report of the Chief Librarian be received for information purposes.

TO: MUNICIPAL MANAGER 1978 November 14

155

FROM: CHIEF LIBRARIAN

RE: BURNABY PUBLIC LIBRARY AUTOMATION PROJECTS

RECOMMENDATION:

THAT this report be received for information purposes.

#### REPORT

The Library Board has been considering automation applications for some while and Council's attention was drawn to this by the Municipal Manager in his Letter of Transmittal attached to the 1978 Annual Budget. The Library Board has adopted the recommendations contained in the Automation Projects Report.\* Since this has implications for expenditures within the 1979 Provisional Budget now under consideration by Council, the following summary has been prepared for the information of Council.

### Objective

The underlying objective of automation in the Burnaby Public Library is to respond to the needs of the community by maximising accessibility to resources and to increase effectiveness and efficiency of operations while at the same time limiting the growth of operating budgets over the long term. The more specific objectives are

- to increase the efficiency of the system for controlling the circulation of materials
- . to increase access to these and other materials through automated catalogues
- . to provide management data useful in the planning of future services.

Two key areas for automation in public library service are those of circulation control and cataloguing.

\* Attached

ITEM Supplementa	ry 16
MANAGER'S REPORT NO	. 32
COUNCIL MEETING 19	78 11 20

## Circulation Control

The existing circulation control system microfilms the transaction when material is borrowed from the library. Overdue notices and reserved books. operate on a manual basis. One limitation of this system is that it is " labour intensive: this limitation is growing in significance. Automated circulation control would allow the library to handle an increased volume of transactions more efficiently with a reduced staffing requirement.

2 .

A computerised circulation control system consists of a central processing unit with all of the library's holdings and patron information stored in its memory. The computer maintains a record of transactions and matches books with readers, produces overdue notices for outstanding loans, signals the check-out clerk when a user has fines owing and when his card has been suspended, and automatically holds books required by other library users.

A major benefit from automated circulation control is the availability of precise management data on collection usage permitting inventory control and the more effective selection and deployment of library materials. The information will allow the better development of collections according to reader usage patterns. The automated circulation control system will generate additional fines revenue while ensuring increased stock turnover. Stock inventories will be able to be carried out on a continuous basis using existing staff.

A major requirement of automated circulation control in Burnaby Public Library is that of meshing with systems within neighbouring public libraries in order to exchange information concerning library users and have access to a wider range of library materials. Vancouver Public Library is presently in the process of evaluating automated circulation control systems. Burnaby is represented on its Evaluation Committee. Utilising the central processing unit to be installed in Vancouver Public Library will allow Burnaby Public Library to avoid the expense of purchasing its own computer.

# Automation of Cataloguing Functions

At the moment Burnaby Public Library catalogue records are in card form. Although a number of cards are purchased from suppliers almost half of the materials received in the library require catalogue records to be originated within the Cataloguing Department. The catalogue has an inventory function. However it is also required to show whether a specific book identified by author, subject, title or other means is owned by the library or whether any unspecified materials on a given subject or by a given author are available. The catalogue should indicate the location of the book within the library. In addition to a main catalogue it is necessary for catalogues to be available in various locations. The catalogue is a means by which the vast array of library materials is organised and is the key by which these materials can be made accessible to library users.

A major benefit from automating the catalogue is that it can be reproduced and maintained in all branch libraries without the expense of multiple fi'ing and of updating that such a catalogue would now require. These problems are so enormous that without automation it is presently impossible to provide such catalogues within Burnaby branch libraries thereby severely limiting public access to the library's resources.

The movement of catalogued materials from branch to branch is severely limited by the existing system. Automation will allow this to be carried out very simply and very cheaply. An additional benefit from automating the catalogue will allow the library access to materials now held in other libraries thereby expanding the range of accessibility for library users. 156

A key factor in automating the catalogue is that the international cataloguing rules used by libraries are to undergo substantial revision in the very near future and automation offers the only means by which Burnaby Public Library can efficiently bring its records into line.

Automation of the catalogue would be carried out in two phases

. new materials being currently added to the library . existing materials already in the library.
